

# DxP S1000D for Windchill

## Technical Publications using a common source database

The S1000D specification enables a shift from traditional book-based documentation to an information-centric approach. It has evolved over time to include various applications and products from Defense systems, Civil aviation, Construction industry and Ship industry.

DxP Services is proposing a S1000D module that can be seamlessly integrated to your Windchill PLM platform as part of the digital continuity of your product lifecycle. It is also integrated with the other DxP S-Series modules.

### S-Series standards-based solution

- ✓ **Data benefits:** S1000D ensures interoperability and standardization
- ✓ **Authoring efficiency:** The reuse of data and predefined document structures in S1000D reduces update costs and streamlines content creation
- ✓ **Implementation guidance:** S1000D provides conformance and compliance
- ✓ **Lifecycle cost reduction:** Implementing S1000D reduces overall costs, improves operational readiness, and increases access to necessary information
